

STOPPING FLOODING IN KRŠKO SLOVENIA

Location: Krško, Slovenia
Customer: City of Krško, Slovenia

PROBLEM:

The customer needed to choose one of the available methods in order to protect the outfalls in the embankment on the Sava river from backflow. After due consideration it was decided that WaStop was the perfect solution for their needs.

SOLUTION:

The customer was only convinced that they had made the right decision once the valve had actually been installed. At which point they understood that WaStop was the best solution for their needs. Despite having a slightly higher purchase price, because installation was fast, and that once installed the product simply functions gave peace of mind to the customer.

Design: Stainless Steel DN1200 WaStop
